CORE / YOUR DAILY FREIGHT WORKSPACE

# A useful first step, then a repeatable day

ProspectSentinel helps freight reps turn account context into a conversation and a dated next action. The guided start keeps the first session focused.

| | |
|---|---|
| **GUIDED START** | Add or choose an account, review its brief and save a next action. Start with one prospect instead of configuring every tool. |
| **TODAY** | Return to due follow-ups and account priorities with the reasons for attention in context. |
| **ACCOUNT BOOK** | Keep contacts, notes, pipeline context and follow-ups connected. Import and export your saved records. |
| **REP CONTROL** | Inspect sources, retain Do Not Contact controls and review drafts before reaching out. |

14-day Core trial. Paid plans and toolpacks use assisted setup. Preview access is confirmed separately.

# More depth when the work calls for it

Individual Core is $49/month and Pro is $99/month. Team plans are $59 for Core and $109 for Pro per contributor per month, with a three-contributor minimum.

| | |
|---|---|
| **PRO** | Deeper research, supported discovery, cadences and coaching. Pro includes Discovery starter access. |
| **DISCOVERY** | $29 per assigned user per month. Explore supported company, facility and network data through an assisted pilot. |
| **QUOTE & COVER** | $39 per assigned user per month. Work with lane rates, match your carrier book and prepare quote documents. Add Pulse records spot rates. |
| **ASSISTED LAUNCH** | Confirm seats, source coverage and usage before purchase. Specialist tools are assigned to the people who need them. |

14-day Core trial. Paid plans and toolpacks use assisted setup. Preview access is confirmed separately.

# The next layer keeps people in control

New account workflows extend the product with reviewed internal actions, reusable source-linked context and a read-only AI connection.

| | |
|---|---|
| **STEWARDSHIP** | For one selected account, an agent prepares a proposed next action. An authorized person approves before the internal follow-up and receipt are saved. |
| **KNOWLEDGE** | Reuse a revision built from supported profile and review-event sources. Changed or unavailable sources require a fresh check. |
| **READ-ONLY MCP** | A compatible client such as Codex can read saved accounts, signals and follow-ups through expiring, revocable workspace-scoped access. |
| **CONTROLLED PREVIEW** | Access requires assisted activation and is separate from standard trial access. These flows do not promise autonomous outbound work. |

Account agents, knowledge and MCP are controlled previews requiring activation. They are not included in the standard demo or trial.
